

What prompts/get returns

messages, with roles

user

“Review ACC-1001.”

assistant

“Score 41 (moderate). Drivers:
utilisation 0.62, 2 late payments.”

*the answer you want,
put in the model's mouth
before it answers*

user

“Review ACC-1042.”

host prepends all three

model context

prefix (3 messages) + the real task

*the model has now seen
the format, the length,
and that drivers are
quoted numerically,
with no instructions
describing any of it*

Demonstration is denser than description, and it fails more gently: a misread instruction produces something arbitrary, a misread example produces something close to the example.
