

Where a test belongs

*a suite you
gate deploys on*

*real model
minutes, money
non-deterministic*

evals

integration

*stubbed model
milliseconds*

contract

*no model
microseconds*

unit

*no model
microseconds*

*208 of Meridian's
210 tests live
in these two*

deterministic: no model anywhere in here

*If your suite is slow or flaky, the question is not how to stabilise the model.
It is why that assertion is not two layers further down.*
